Introduction & Title

Good morning to our respected panel members, trainers, and everyone here today. We are The Magnificent 7, and we are pleased to introduce our project, SediaNiaga. Our tagline is “From Knowledge to Opportunity”.

SediaNiaga is a web-based digital platform designed to help aspiring and existing entrepreneurs assess their business knowledge, identify learning gaps, and access personalized learning. We also aim to support rural entrepreneurs who may face challenges attending physical training programmes. Through SediaNiaga, we hope to make entrepreneurship learning more accessible, structured, and relevant to individual needs.

Problem Statement

SediaNiaga addresses three key challenges. The first is the business knowledge gap. Many people want to start or grow a business, but may not understand their strengths and weaknesses in finance, marketing, operations, and business management.

The second challenge is limited access to training. For rural entrepreneurs, attending programmes in cities may involve long journeys, travel expenses, time constraints, and family or business commitments. The third challenge is fragmented information. Entrepreneurs often visit multiple websites to find courses, support programmes, and assistance. These challenges form the foundation of SediaNiaga, and we plan to validate them through surveys and user interviews.

The Solution

To address these challenges, SediaNiaga connects assessment, learning, and entrepreneurial opportunities in one user journey. It begins with Business Profiling, where users identify their business stage and provide basic information.

Next, they complete a Business Assessment to evaluate knowledge across key business areas. Based on the results, the system helps identify strengths and learning gaps. Users are then guided to our Learning Management System, or LMS, which offers relevant videos, modules, and quizzes. As an optional feature, they can also explore entrepreneurship programmes and assistance opportunities. Our goal is not only to identify knowledge gaps but also to guide users towards their next learning steps.

The Product

SediaNiaga is built as a responsive website, not a downloadable mobile application. Users can access it from a laptop, desktop computer, or mobile web browser.

Our key features include Business Profiling, Business Assessment, Scoring and Analysis, Personalized Learning, a Progress Dashboard, and an optional Opportunities Hub. AI is intended to explain assessment results and support learning recommendations, while scoring rules should remain consistent and reviewable. The LMS lets users access videos, short modules, and quizzes at their own pace. We also aim to keep the website simple and efficient for rural users who may have limited internet connectivity.

Target Audience

We have identified four initial target groups. First, aspiring entrepreneurs who are planning to start a business. Second, microbusiness owners and early-stage entrepreneurs. Third, rural entrepreneurs facing barriers to physical training. And fourth, training providers and entrepreneurship organizations that may use SediaNiaga with their participants.

We propose starting pilot testing in Sabah before exploring opportunities across Malaysia. At this stage, our priority is to validate user needs and product suitability. These are proposed target segments, not confirmed customer numbers.

Business Benefits

SediaNiaga offers potential benefits to both individuals and organizations. For aspiring entrepreneurs, it helps them understand their business knowledge before starting. For existing entrepreneurs, it helps identify areas for improvement.

For rural communities, web-based learning can reduce the need to travel for basic training. For training providers, SediaNiaga could be a useful pre-assessment tool for identifying participants' learning needs. In the future, we may explore revenue models such as assessment packages, learning subscriptions, and institutional access. For now, this slide focuses on user benefits rather than finalized prices.

Implementation Plan

Our proposed implementation plan consists of four phases over an initial twelve-week period. Phase one focuses on improving the prototype. Phase two covers the review of assessment questions, learning recommendations, and website functionality.

Phase three involves pilot testing with real users, including aspiring entrepreneurs, business owners, and rural participants. Phase four focuses on analyzing feedback, improving the platform, and exploring partnerships. This is a proposed timeline and may be adjusted based on the team's capacity and system readiness.

Competitive Analysis

We have identified several platforms with related services, including Strivers’ Hub, Closr, SME Corp SCORE, and MyAssist MSME. Strivers’ Hub offers assessment and learning resources. Closr focuses on digital maturity assessment. SME Corp SCORE assesses enterprise capability and competitiveness, while MyAssist MSME offers access to business support information and services.

SediaNiaga aims to differentiate itself through business knowledge assessment based on a user’s business stage, followed by relevant learning recommendations. We also prioritize flexible learning access for rural entrepreneurs. We recognize that some of these features already exist. Our aim is to connect them into a structured, assessment-driven learning journey. Any unverified competitor features should be clearly marked.

Case Studies / Your Traction

To illustrate potential use cases, we prepared two example scenarios. The first involves an aspiring entrepreneur who wants to start a business but is unsure about financial management knowledge. With SediaNiaga, this person could complete an assessment and receive recommendations for suitable financial learning modules.

The second scenario involves a rural entrepreneur who has difficulty attending training in the city. With sufficient internet access, this user could learn through our website at a convenient time. These are illustrative scenarios, not real customer testimonials. Our next step is to test these experiences with actual users and document the results.

Financial Projections

Since SediaNiaga is at the demo stage, our financial projections are based on preliminary assumptions. For example, we have used a hypothetical learning package price of RM19 per month and considered several scenarios for paying users.

Cost categories include hosting, database services, AI API usage, website maintenance, LMS content development, and user support. These scenarios help us understand the relationship between user growth, gross revenue, and operating costs. The figures are planning assumptions, not actual sales or finalized SediaNiaga pricing.

Cost of Implementation / The Ask

For the initial stage, we propose a three-month pilot. Our estimated direct cash cost is between RM1,000 and RM3,300, excluding development labor. This planning estimate covers website infrastructure, AI services, user testing, and basic operational support.

Beyond financial resources, we are seeking collaboration opportunities with entrepreneurship communities and training organizations. These partnerships would allow us to validate the assessment, LMS, and website experience with real users before expanding the platform.

The Team & Closing

Finally, let us introduce the people behind SediaNiaga. We are The Magnificent 7, and the project currently has five team members. Mr. Sufian is our Group Leader, supporting overall team direction and coordination. Fadilah is our Project Lead, coordinating project planning and delivery. Ryner and Shikin are our Frontend Developers, focusing on the interface and user experience. Benn is our Backend Developer, responsible for backend services and system functionality.

To conclude, we believe access to business knowledge and development opportunities should not be heavily limited by geographical location. Through SediaNiaga, we hope to help entrepreneurs understand their knowledge gaps, improve their skills, and discover opportunities. SediaNiaga — From Knowledge to Opportunity. Thank you for your attention. We welcome your questions.
